

Anodized aluminium coils & sheets

Company profile & product portfolio

An Italian family business since 1946

Overland is an Italian family company specializing in Continuous Coil Anodizing of aluminium, supplied in coils or cut into sheets.

We are among the few companies in the world able to master this process: each coil is anodized from end to end on a single, fully automated line.

Clients in architecture, interior design, retail, consumer goods and transport choose our aluminium for a refined look that lasts.

Anodized aluminium coil

Continuous Coil Anodizing

Anodizing is an electrochemical process that grows a hard oxide layer on aluminium. Running it continuously means the coil passes through every stage in one uninterrupted, fully automated line.

Elegant appearance

A refined metallic look that stays beautiful over time, in natural silver or in a range of shades from champagne to deep black.

Exceptional durability

Hard-wearing and resistant to scratches and corrosion, indoors and outdoors, so surfaces keep their quality year after year.

Low maintenance

Easy to clean and never needs repainting: a simple wipe is enough to keep it looking new, saving time and costs over its life.

Sustainable & recyclable

Built to last, keeping its look for years, and fully recyclable at end of life for a lower environmental impact.

Finishes & colours

Three premium finishes, from raw industrial to ultra-reflective mirror.

Mill

Raw, industrial look.

Brushed

Contemporary texture.

Mirror

Sleek and ultra-reflective.

A palette from pure colours to precious metals

Pure colours — red, blue, green — sit alongside metallic shades that replicate gold, copper and bronze. Every colour is UV-stable, corrosion-resistant and integrated into the aluminium itself, so it lasts without peeling or fading.

Standard shades · custom colours on request

Technical specifications

MATERIAL

Aluminium alloy	1000 · 3000 · 5000 · 6000 series
Temper	H14 · H16 · H18 · H22 · H24
Thickness	0.2 – 2 mm (0.008" – 0.08")
Anodic layer	2 – 10 µm (12 – 15 µm on request)
Protective film	55 µm blue/transparent · 80 µm white/black · 100 µm optic fibre

COILS

Width	500 – 1500 mm (20" – 59")
Weight	up to 10 t

SHEETS

Width	up to 1500 mm (59")
Length	up to 6000 mm (236")

Coloured coils and sheets are available in widths from 500 to 620 mm.

Anodized sheets, cut to length

Where our aluminium goes

Architecture & construction

Façade and ceiling panels, composite, honeycomb and insulated panels, column cladding: large surfaces that keep their colour and finish for years.

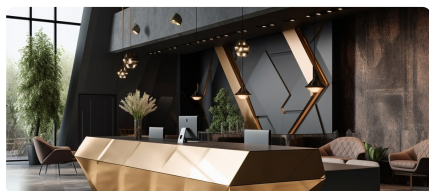

Commercial & retail

Shop fittings, product displays and signage for boutiques and retail spaces, and premium packaging such as cosmetics.

Consumer products

Appliance fronts, electronic devices, letterboxes and everyday metal goods that have to look good through years of daily use.

Interior design

Laminated door and furniture panels, wall features and finishing details: a metal surface that looks refined up close and stays easy to clean.

Transportation

Interior trim for cars, fittings for trains and interiors for cruise ships, where materials must be light, durable and elegant.
